

Cold Bay

Monday, 09 July 2007

This was the most critical leg of our flight. Long range over the

Pacific Ocean (2375 miles), Fuel limitation and additional weight was compounded by 4 to 23 knots of head wind. But we pulled back on the power to save fuel, and landed with 1.5 hours of reserved fuel.

We got a little food for our long 2375 mile trip over the Pacific Ocean

Since we are flying East to West, we are losing daylight and we have to fly through the night to make it to Alaska.

We left Japan on Sunday at 1:00 pm and flew for 17 hours to get to

Cold

Bay . We arrived at 12:15 pm on Sunday. Our arrival in Alaska was about an hour earlier than our departure when we left

Japan on the same day. It is strange to go back in time and have two Sundays in the same week.

After flying 17 hours, we were ready to get some food and rest. But there are no restaurants in

Cold

Bay that has a population of less than 50.

Since there is no restaurant in

Cold

Bay , the fuel company owner took us to his home and made us a New Orland style dinner.Â Â Â
